

In order to be eligible for entry into practicum (hospital and/or ambulance experiences), students will be required to provide documentation of the following:

- COVID-19 Vaccination. If taking a 2-dose vaccine, both doses must be completed.
- Hepatitis B immunization (series of 3 vaccinations) or blood titer test showing immunity.
- Influenza vaccination for current year. Influenza season is considered October – April. Dates may be adjusted based upon recommendations of the CDC and/or clinical sites requirements.
- MMR immunization (2 doses) or a blood titer test showing immunity.
- Tdap immunization including a booster within the last 10 years.
- TB QuantiFERON blood test.
 - Please note, the blood test is the ONLY accepted form of TB testing that is recognized by our program.
- Varicella immunization (2 doses) or a blood titer test showing immunity.

At the start of the course, students will be provided with directions for obtaining an account to upload and track your immunization records, background check and other site specific information. It is in your best interests to begin compiling copies of your immunization records or beginning titer testing/immunizations prior to the start of the program. Delays in obtaining records/titers/immunizations will result in delayed practicum experiences which may result in failure of the program.

For immediate questions regarding immunization records, please contact the [Clinical Coordinator](#)
